Profile

I am an accomplished and proactive Software Engineer, boasting 4+ years of hands-on expertise in developing cutting-edge software utilizing the latest web technologies. Proficient in HTML5, CSS, JavaScript, SCSS, React, NextJs, TypeScript, Node, Express and other programming tools, I excel in implementing Front End Software Architecture, APIs and Authentications on the front end for web applications.

My analytical mindset and problem-solving prowess enable me to tackle complex challenges. Notably, I have successfully delivered diverse software products of varying scales. Having worked collaboratively with diverse development teams across the globe, I am a fervent advocate for fostering deep team collaboration through Agile methodologies and promoting team growth and personal development via peer code reviews.

Work Experience

Software Engineer
Kominiti

📅 10/2021 – present   ◉ JACKSONVILLE, FLORIDA, UNITED STATES

- Working on the Kominiti2.0 project using Nextjs, ReactJs, Typescript, Php Laravel for the backend, Azure for CI/CD pipeline, and Cloud Architecture.
- Working as a lead frontend engineer to develop the frontend architecture, end to end features including Code architecture, UI Development, route and navigation system, workflows, user flows, design flows, logic implementation and backend and server integration, unit tests, code merging and reviews

- Worked in a team to develop and maintain the web application and services using Nextjs, Reactjs, typescript, material UI, and Ant design. We used PHP Laravel for backend services and API development
- Convert high-fidelity mockups to responsive web application pages with mobile responsiveness for mobile webpages.
- Created implementations for complex features, and workflow which enhanced user experience and helped with system navigation.

- Reduced page load time by 50% for the whole system by refactoring and redesigning the screens.
-Collaborate with business analysts, users, and QA teams to ensure market quality and provide implementations/bug fixes through REST API calls and front-end code implementation.
-Improved the Landing Page User Experience led to higher customer retention and reported customer satisfaction.

-Built the redesigned admin Module and Dashboard, implementing a robust and functional template for improved access to user experience and activity metrics which added to the company's growth.

Software Developer
Ivyarcafrica

📅 04/2020 – 10/2021   ◉ LAGOS, NIGERIA

- Worked with a team that developed a Learning Management System developed using ReactJs and NodeJs which has gained a lot of new users.

> Built reusable components and functions for future use.

> Using Agile methodology, I participated in daily standup meetings with the IT team to discuss progress and also plan for a future feature that is to be developed in the project.

> Understood the business requirements and translated them into technical requirements.

Work Experience

> Troubleshooting interface software and debugging application codes

Education

Physiology | Bachelors
University of Benin

📅 01/2010 – 01/2014 📍 BENIN CITY, EDO STATE, NIGERIA
