Github: <https://github.com/jovialcore>

I am a software developer who is skillful with **5 years** of experience. Skillful in backend development. I have a diverse skill set that includes **PHP, Laravel, Cakephp, Stripe, Vuejs/Nuxt, Javascript, AlpineJS, Bootstrap, Nodejs, React, wordpress, Tailwind and CSS3**. I also share some of my knowledge via technical writing on my [blog](#).

Work Experience

Backend PHP Developer

[Kominiti](#)

July 2023- present

php, Laravel, Stripe

- Developed refactored APIs for the digital marketplace platform that onboards digital artisans, freelancers, clients, etc., resulting in a 40% improvement in system scalability in php and laravel.
- Designed and wrote the php API endpoint for seller and buyer dashboards, optimizing user experience, resource management, and access.
- Built an escrow service for the new payment systems, reducing transaction failures by 75%.
- Developed a Wallet service also for this system.
- Connected the payment platform to use Stripe Connect for payouts, Stripe webhooks ensuring a seamless and efficient integration process with php.
- Oversaw the migration of old users from the old application to the new application.
- Refactored the previous payment system, increasing transaction speed by 50% and significantly cutting maintenance costs by 30%, contributing to a better user experience and increased revenue.
- I am the internal domain expert for payment and wallet flow plus stripe for kominiti payment.

Sub Product 1 [Kominiti Wall](#)

- Kominiti socials is a subsystem of the main kominiti core. A social platform of kominiti referred to as WALL
- I wrote the php/laravel api that improved social interaction flow for the wall. This includes how users connect with other users, suggesting profiles, etc

Sub Product 2 [Kominiti Jobs](#)

- Kominiti jobs is a job platform that is an extension of kominiti. Working with the frontend developer, I wrote the php api for every functionality on jobs.
- The core functionalities include, posting of jobs, applying to jobs, search and elegant filtering, notifications, etc.

- [Certified proficient in javascript](#)

Open Source Projects/Contributions

Tech Revelation for African Startups Project

whatcompanystack.com

php, laravel, Vuejs, gpt3

I am an open source person in my free time. I led the development of an open source project called what-company-stack with a friend. What-company-stack is a web application that aims to list the tech stack used by African Startups/companies.

Built with php/laravel and vuejs. The project intended flow is basically to scrap a few job sites, process these data, using Ai (gpt 3) in the data processing process to rank the stacks. This can run at least once a week to update the database.

Opensource Cloudinary Package Developer

[Cloudinary SDK](#)

cakephp, Vuejs, gpt3

I worked on an open source cakephp SDK that manages upload of media files to Cloudinary. It was built with php
